Biochemistry 21:6620-6625(1982).
Incommentary 21:6620-6625(1982).
Incompose protein is not a protease, but it activates plasminogen by complexing with it. As a potential virulence factor, it is thought to prevent the formation of effective barriers around the site of infection, thereby contributing invasiveness of the cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3D-structure; Direct protein sequencing; Plasminogen activation;

Pucrion: This protein is not a protease, but it activates plasminogen by complexing with it. As a potential virulence factor, it is thought to prevent the formation of effective fibrin barriers around the site of infection, thereby contributing to the invasiveness of the cells.

"Complete genome sequence of an M1 strain of Streptococcus pyogenes.";
Proc. Natl. Acad. Sci. U.S.A. 98 4658446312001).
-!- FUNCTION: This protein is not a protease, but it activates
plasminogen by complexing with it. As a potential virulence
factor, it is thought to prevent the formation of effective fibrin
barriers around the site of infection, thereby contributing to the
invasiveness of the cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SOLVVSMAGIVECTDKKVFINFFEIDLTSOPAHGGKTEOGLSPKSKPFATDNGAMPHKLE

Patent No. 587699

GENERAL INFORMATION:
APPLICANT: Hua-Lin Wu
APPLICANT: Guey-Yuch Shi
TITLE OF INVENTION: Preparation of novel streptokinase
TITLE OF INVENTION: mtants as improved thrombolytic agents
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Jeing & Chang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ISBE: Jeing & Chang

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Properties: Streptokinase gene
The gene product binds to human plasminogen
The gene product is an activator of human plasminogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LeuSerProLysSerLysProPheAlaThrAspSerGlyAlaMetSerHisLysLeuGlu 60

Patent No. 5434073
GENERAL INFORMATION:
APPLICANT: Dawson, Keith M
APPLICANT: Hunter, Michael G
APPLICANT: Czaplewski, Lloyd G
TITLE OF INVENTION: Proteins and nucleic acids
NUMBER OF SEQUENCES: 73
CORRESPONDENCE ADDRESS:
ADDRESSEE: Dr. John J. McDonnell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3: Dr. John J. McDonnell
Ten South Wacker Drive, Suite 3000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            COMPUTER READABLE FORM:
MEDIUM TYPE: Ploppy disk
COMPUTER: IEM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Vere
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/854,596B
FILING DATE: 03-UN-1992
CLASSIFICATION: 435
